

ABDRAHEEM OLAJIDE KEHINDE

Embedded Systems · IoT · Electrical & Power Engineer

+234 9058659656 abdraheemkehinde@gmail.com [LinkedIn](#) [GitHub](#) [Credily](#)

PROFILE

Skilled Electrical and Embedded Systems Engineer and CAD Designer with 5+ years of hands-on industry experience spanning embedded systems, IoT, PCB design, and full-stack software development. NVIDIA-certified in deep learning, with a first-place hackathon win and a proven record of delivering real-world engineering solutions. Adept at bridging hardware and software, with strong leadership and cross-functional teamwork skills.

EDUCATION

University of Lagos B.Eng. Electrical & Electronics Engineering	CGPA: 4.01 / 5.0 Oct 2021 – Present
Yaba Technical College National Diploma – Electrical Engineering	GPA: 3.84 / 4.0 · Distinction Apr 2019 – Aug 2022

WORK EXPERIENCE

UBA Group · Network Engineering Intern <i>Cisco CLI · SolarWinds · PuTTY · Enterprise Networking</i> - Gained foundational experience in enterprise networking and Cisco device configuration in a large-scale banking environment. - Monitored real-time network stability via SolarWinds, reducing branch downtime response time. - Diagnosed and resolved internal network issues — including slow links and downtime incidents — across 20+ remote bank branches.	Nov 2025 – Jan 2026
Basic Works · Electrical & Embedded Engineer <i>MATLAB · AutoCAD · Proteus · EPLAN · C++ · Arduino · KiCad</i> - Delivered 5+ electrical installation projects including solar panels, inverters, street lighting, and LED display screens. - Utilized AutoCAD, EPLAN, Proteus, and MATLAB for circuit design, simulation, and deployment. - Developed embedded IoT devices with Arduino, ESP32, and Raspberry Pi for monitoring and automation. - Assembled control panels, created PCB designs using KiCad, and ensured compliance with safety and efficiency standards. - Designed custom multi-layer PCBs in KiCad (buck converters, NFC and MCU subsystems) and managed fabrication through JLCPCB / PCBWay.	Oct 2024 – Present
RS Colman · Software Engineer <i>React JS · Node.js · Express.js · MongoDB · PHP · Flutter · Python</i> - Built and deployed 10+ custom mobile and web applications for SMEs and individual clients. - Led full-stack development (React JS, Node.js, Express.js, MongoDB, Flutter, Python) integrating authentication and secure contract storage. - Configured Linux-based virtual machines for automated processes, improving deployment efficiency. - Implemented database solutions (SQL, MongoDB) and optimized backend performance.	Nov 2022 – Present
RS Colman · Software Engineer Intern <i>React JS · C# · ASP.NET · Lego Mindstorms · Arduino</i> - Built 3 robotics prototypes — color detector, line follower, and distance-measuring robot — using Lego Mindstorms. - Developed terminal and GUI applications using Visual Studio .NET Framework and C#. - Gained practical experience in circuit simulation using MATLAB, EPLAN, and Proteus.	Mar 2019 – Aug 2020

TECHNICAL SKILLS

MCUs / SoCs	ESP32 / ESP32-S3, ESP8266 (ESP-07), Arduino (AVR), Raspberry Pi, Orange Pi Zero 3, STM32
Firmware	C / C++, Arduino framework, ESP-IDF, FreeRTOS, interrupts & timer ISRs, ADC / PWM, OTA updates
Protocols	I ² C, SPI, UART, NFC (PN532 / MIFARE Classic), BLE, IR, OBD-II, GPIO, MQTT, Wi-Fi
Sensors / IO	PN532 NFC, RCWL-0516 radar, MAX30102, MPU6050 IMU, NEO-6M GPS, DS3231 RTC, OV2640, 74HC595 & 7-segment displays, relays
PCB / Hardware	KiCad (schematic + multi-layer PCB), DRC / DFM, buck converters (TPS563201), power-rail design, JLCPCB / PCBWay fabrication
Electrical / Power	Solar PV design (PVsyst), power-quality analysis (Mi550), inverters & control panels, load sizing, LTSpice, EPLAN, AutoCAD, Fusion 360
Simulation / AI	Proteus, MATLAB / Simulink, edge-AI / TinyML
Software	Python, JavaScript (React / Node / Express), Flutter, Firebase, Git, Linux
Languages	C/C++, Python, JavaScript (React JS, Node.js, Express.js), PHP, SQL, HTML/CSS, Arduino

PROJECTS, LEADERSHIP & CERTIFICATIONS

IEEE-IES Hackathon · [1st Place Winner](#) · University of Lagos Feb 2026

- Won the inaugural Electronics Hardware Hackathon hosted by the Industrial Electronics Society (IES) of IEEE at the University of Lagos.
- Designed and built a functioning radar system solution in a 1-day hackathon

Solar Street Light · [Project](#) Mar 2025

- Designed and constructed a motion-controlled, solar-powered streetlight that operates only at night.
- Optimized logic circuit using **LTSpice** and **Proteus**; managed 3D fabrication design in **Fusion 360**.

Unilag AIR Lab · [Robotics](#) Jul 2025

- Programmed a robotic arm with **inverse kinematics** and **Python**-based computer vision to play chess.
- Integrated **AI/ML** with **MCP servers** for seamless LLM integration.

Unilag SEES · [Volunteer](#) Apr 2024

- Organized technical workshops and hands-on training for electrical engineering students.
- Coordinated industry-linked competitions and supported teams in building small-scale electrical prototypes.

NVIDIA Deep Learning Certification · Fundamentals of Deep Learning Apr 2025

- Completed a 7-day intensive workshop on neural networks, backpropagation, CNNs, RNNs, and transfer learning.
- Built a prototype **LLM** exploring tokenization, embeddings, and attention mechanisms.

GIZ Competency-Based Training · Deutsche Gesellschaft für Internationale Zusammenarbeit Apr 2025

- Completed an exclusive 3-day programmed developing teamwork, team building, and technical training delivery skills.

Commercial Solar PV Design

PVsyst simulation for a commercial facility: 840 bifacial modules, 3×150 kW inverters, and 3×241 kWh ESS battery cabinets.
